

Delayed Blindness testing

Delayed blindness (DB) is now available as a commercial test for processing at the Neogen lab in Australia.

To launch this, Neogen & PBB are offering NZ Hereford breeders the following promotion until the end of May 2024:

MD+DB tests - \$50.00+GST
(stand-alone DB test only - \$36.00+GST)

Complete the Neogen DNA application for new samples [here](#)

Please note – samples will be genetic tested in the first instance e.g. on the Hereford SNP bundle, followed by DB testing or MD/DB testing (as standalone tests). Please allow for an extended turnaround time.

There is also the possibility to retest existing samples already at Neogen.

If your animals require DB testing using existing samples - complete the Neogen DNA application (as above), with the animal's SNP case number included in the "barcode" column.
